

Quality management policy

Technolution takes care of its clients' needs in the field of complex technological issues with highly demanding requirements. Technolution delivers working solutions in which electronics, programmable logic, and software work in perfect harmony, solutions that are often groundbreaking and that contribute essentially to realizing its clients' objectives.

Technolution strives to become and remain the best partner for our clients. Our mission is: 'We create technical systems and products and make these an asset for your business'.

The need to improve continuously and make working systems is close to Technolution's heart. Technolution solves problems by simplifying them instead of making them more complex. Our applicable philosophy is: 'Simplicity is the soul of quality'.

Technolution has been certified in accordance with ISO-9001 since 1998. The scope of the quality management system is service regarding advice, specification, design, development, certification and management of software and electronics for technical automation.

The quality policy of Technolution has the focus to:

- provide fitting solutions based on the client's demands;
- deal with the expectations of stakeholders;
- manage risk and make the best of opportunities;
- adapt to a changing environment;
- secure knowledge and create a professional working environment;
- comply with relevant legislation and other demands.

The direction upholds the quality management system and makes sure that, within this area, set goals are reached and maintained. The quality goals are evaluated on an annual basis and therefore offers a framework that allows for continuous improvement.
